

# Clock system for Finance

## Lloyds's Building

### Overview

The company ISS Coflex, in charge of the facilities at Lloyds's building, contacted Bodet as the clocks in their premises were inaccurate

### Customer requirements

The clocks were battery operated and needed a lot of maintenance (change the battery, perform the summer/winter changeover manually). The customer wanted to replace the clocks with more modern design digital clocks.

### Bodet recommendation

We recommended our wireless clock system. All the clocks are 100% accurate with no interference or interruption generally associated with standard radio controlled clocks.

### Benefits:

- Reduce confusion and inefficiency by synchronising time throughout all floors
- Reduce costly maintenance (automatic summer and winter changeover).
- Suitable for existing building (no cabling)
- Extendable system (no limitation of the number of clocks on the system)

The wireless signal is part of the licence free ISM band (Industrial Scientific and Medical) according to ETS 300-220. No interference with other electronics equipments guaranty.

### Material

LED Digital clock [Style Ellipse](#) compatible with the [Wireless Clock System](#)
