

Clock system for Industry

BDM Logistics

Overview

The company provide customised storage and distribution solutions for companies selling high value goods in large volumes throughout the UK.

Customers requirements

The customer required large display clocks to show the right time around the warehouse.

Bodet recommendation

we have recommended our large LED clock wirelessly synchronised as we couldn't get a radio signal in the premises.

Material

- LED Digital clock [Style 12](#) compatible with the [Wireless Clock System](#)

Church House Conference Centre (Westminster)

Overview

Church House have got many old dials around the building. The clocks used to work on a wired clock system but during the latest refurbishment most of the cable between the clocks was cut.

Customer requirements

The customer wanted to keep the existing dials as some of them had special design but didn't want a wired system.

Bodet recommendation

As the building was just refurbished, a traditional clock system with wires between the clocks wouldn't have been appropriate.

We have recommended our wireless clock system and adapt existing clocks to make them compatible with the wireless technology.

Material

- [Profil 930](#) compatible with the wireless clock system

- Clock customisation (wireless compatible):
