- Management of anti pass-back
- Management of unauthorised access attempts (persons or badge numbers)
- Print out of people present for fire evacuation
- Controlled opening of an access door via software
- Combined with intruder alarm system
- Printing personalised badges
- Options: - Visitor management module
- Access rules and Auto Events management

Bodet points

- ⊕ Integrates Kelio time management:
 - Work schedule = Access authorisation schedules
 - Absences = Access lockouts
- ⊕ The **badge** may be used as a **key** to modify the security level of access in real time.

Hardware architecture

Bodet

Kelio Protect
helping to keep
your premises secure

Technology

Based on 100% Java technology, the application is accessed using your Web browser.

Simplicity

Intuitive and ergonomic, Kelio Protect enables basic or more complex programming.

Autonomous operation

All rules and authorisations are stored in the hub in order to allow the server to operate autonomously.

Interoperability

Multi-technologies of badges and readers on the same facility. Integration with the Kelio Prima, Integral time management software.

Performance

Management of up to 2,000 employees with the possibility to customise all the rights and authorisations.

Tracking

All events of the system are tracked in order to enable a customised follow-up of entries.
