KelioSecurity

Centralised access control management

Principles

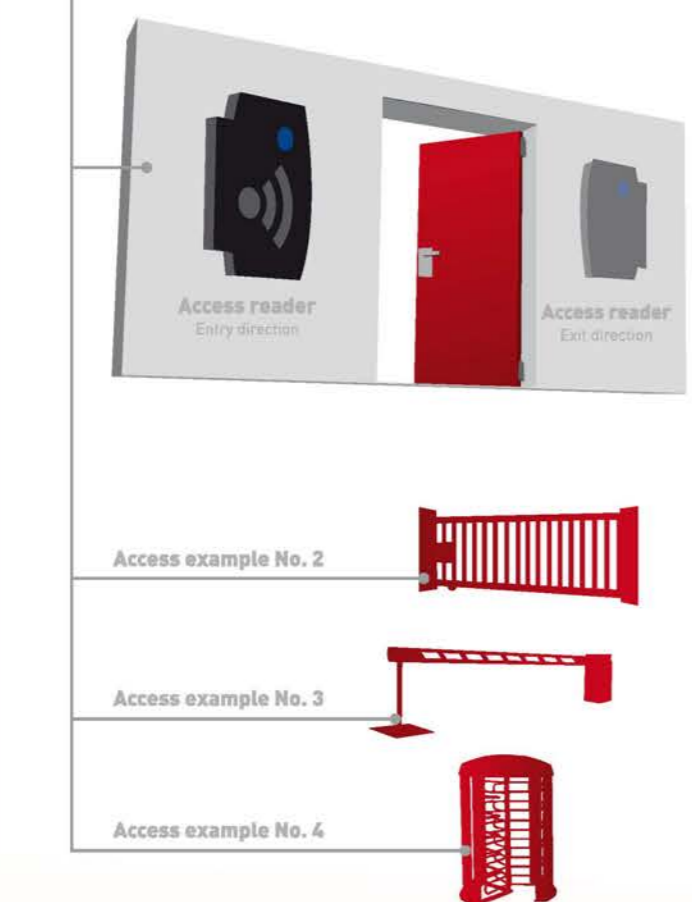

- Access control by desired security level
- Individual management by authorisation profile
- Event log by filters

Main functions

- Graphic access zone supervision
- Real time accounts for the number of people per zone
- Combined intruder alarm system
- Door contact management
- Anti pass-back management
- Opposition list management (persons or badge numbers)
- Printout of the list of those present in case of fire alarm (FES)
- Opening of an access from the software
- Pop-up window warning system with acknowledgement obligation
- Printing personalised badges
- SMS or mail alerts
- Specific access rules management
- Auto events management
- Option: Visitor management module

Bodet's additional key features:

- ⊕ Integrates Kelio time management:
 - Work schedule = Access authorisation schedules
 - Absences = Access lockouts
- ⊕ The **badge** may be used as a **key** to modify the security level of an access in real time

Simplicity
Intuitive and ergonomic, Kelio Security can be set up very easily.

Performance
Extended customisation of rights and authorisations.

Traceability
All system events are recorded in order to be able to have a summary of accesses made.

Technology
Based on 100% Java technologies, the application is accessed using your Web browser.

Autonomous operation
All rules and authorisations are stored in the hub in order to allow the server to operate autonomously.

Interoperability
Multi-technologies of badges and readers on the same facility. Native integration with the Kelio Prima, Integral and Optima time management systems.
